The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the bandgap norm of claim 4 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The disclosure is objected to because of the following informalities: the specification at paragraph 26 indicates that the current source depicted in fig. 3 is constructed in a known manner, but the figure is not itself described or labeled as –prior

art--. Claim 2 appears redundant, since claim 1 already defines a compensation resistor having a negative temperature coefficient.

Appropriate correction is required.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Refer to fig. 1 of Hanna. A differential amplifier 20 is disclosed including two amplifier transistors 22,24 arranged in parallel that may be read as the like elements claimed and their emitters are connected by a resistor 26 that may have a negative temperature coefficient (see lines 25-36 of col. 5) and may thus be read as the compensation resistor claimed. Node 30 connects the emitters to what may be read as the common emitter line claimed to a current source 28. The current provided is however not independent of temperature as claimed, and it would not have been obvious to utilize a temperature independent current source because the current variations are designed to be compensated by the temperature dependent resistor 26 as described in the above noted passage.

This application is in condition for allowance except for the following formal matters:

As above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
